6. Customer Credit Transfer Initiation (pain.001.001.09)

Customer Credit Transfer Initiation message shall be sent by the initiating party to the forwarding agent or debtor agent. Message is used to request movement of funds from the debtor account to a creditor. The message consists of two mandatory building blocks: Group Header and Payment Information.

Group Header: this block is mandatory and is indicated only once. It contains elements that identify the file – message identifier, date and time of message creation, initiation party.

Payment Information: this block is mandatory and repetitive. It contains elements related to the debit side of the transaction, such as Debtor, Debtor Account, Payment Type Information and Requested Execution Date and also one or several Credit Transfer Transaction Information parts which contain elements related to the credit side of the transaction, such as Creditor, Creditor Agent and Remittance Information.

- Rules:**
- R1** - If PaymentTypeInformation is filled both under Payment Information and Credit Transfer Transaction Information, SEB will take guidance from the information under Credit Transfer Transaction Information
 - R2** - If both Service Level Code and Local instrument is used, then SEB takes guidance only from Service Level.
 - R3** - If no value is used in Service Level Code and Local Instrument, then bank processes the payment as non-urgent or European payment depending on the payment instruction data
 - R4** - If INST code is used and beneficiary bank is INST reachable, then payment is processed as instant payment. Other codes allowed by ISO are just forwarded to the beneficiary bank and payment is processed as non-urgent or European payment depending on the payment instruction data.
 - R5** - If Charge Bearer is filled both under Payment Information and Credit Transfer Transaction Information, SEB will take guidance from the information under Credit Transfer Transaction Information.

7. Customer Payment Status Report (pain.002.001.10)

The CustomerPaymentStatusReport message is sent by an instructed agent to the previous party in the payment chain. Message is used to inform the initiating party about the positive or negative status of an instruction (either single or file). It is also used to report on a pending instruction.

The message consists of tree mandatory building blocks: Group Header, Original Group Information And Status and Original Payment Information And Status.

Group Header: this block is mandatory and is indicated only once. It contains elements that identify the file – message identifier and date and time of message creation.

Original Group Information And Status: this block is mandatory and is indicated only once. It contains elements related to payment group information, such as OriginalMessageIdentification, OriginalMessageNameIdentification, GroupStatus.

Original Payment Information And Status: this block is optional and repetitive. It contains elements referencing the original instruction identification (OriginalEndToEndIdentification), status (CustomerPaymentStatusReport) and a set of elements from the original instruction.
